JAZZ RS

e:HEV
TECHNOLOGY

SPORTS GENETICS.

Since the first generation RS was released in 1974, sporting heritage and the joy of driving has surged through Honda's DNA. This passion for the driving experience has been shared with generations of Honda customers. Over the decades, our technology and what our customers ask of us has changed, but still at core of it all the joy of drive remains vital to our connection.

That is why we are excited to announce to you the launch of the All-New Jazz e:HEV RS. Pulling from the sports heritage that shaped our brand, the modern technology, functionality and premium quality that made the Jazz the AA Driven Car of the Year 2022 - Passenger Class, we bring you a true 'everyday sport' model to our Jazz line-up that will feature for the first time ever, Honda e:HEV technology as standard.

The Jazz RS has been developed with the same sports DNA as the legendary Civic Type R. From the very front of the car, the design of grill and bonnet have been adjusted to achieve both cooling drag and front lift without sacrificing air resistance. The frame and overall model has been adjusted to an aggressive design with external accents such as blacked out headlight rings, exclusive RS badging and exclusive front and rear bumpers and side skirts.

This attention to detail continues inside with a sporty overhaul of the interior. The vehicle boasts an upholstered premium gray ultra-suede interior with yellow stitching wrapped around a sports interior including new sports seats. Adding to this, paddle shifters continue the sport driving experience with three selectable drive modes including Economy, Normal and Sports mode.

In Sports mode, acceleration has been increased and the ability to set four stages of deceleration on the fly for increased handling and manoeuvrability has been added. This is supported by a custom sport suspension and tailored engine tuning on the e:HEV electrified hybrid powertrain for an exhilarating driving experience and an overall power

increase of 10 kW on the previous electric motor. Even with all of these changes, the everyday comforts and premium features of the RS remain present. From the latest Honda Sensing technology, iconic magic seats, wireless Apple CarPlay and Android Auto connectivity, through to the panoramic windscreen and anti-fatigue seats.
